

Docker Networking Lab on AWS (Step-by-Step)

STEP 1: Launch EC2 (Ubuntu, t2.micro). Allow SSH (port 22).

STEP 2: Connect to EC2 using: `ssh ubuntu@your-public-ip`

STEP 3: Install Docker:

```
sudo apt update
```

```
sudo apt install docker.io -y
```

```
sudo systemctl start docker
```

```
sudo systemctl enable docker
```

```
sudo usermod -aG docker ubuntu
```

```
newgrp docker
```

STEP 4: Default Bridge Network Test

Terminal 1: `docker run -it --name c1 busybox`

Terminal 2: `docker run -it --name c2 busybox`

Get IP: `hostname -i`

Ping test:

`ping works`

`ping c2 fails`

STEP 5: Custom Network

```
docker network create mynet
```

```
docker run -it --network mynet --name busy1 busybox
```

```
docker run -it --network mynet --name busy2 busybox
```

Ping test:

`ping busy2 works`

Conclusion:

Default bridge: only IP works

Custom network: name + IP works
